FX BLAST

System Manual

Risk warning

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

- Restart your MT4

- Open your favourite chart. Press the right mouse button and pick FXBLAST template.

FXBLAST - MODERATE

Is the most universal mode, providing the most balanced signals.

It provides stable signals with limited risk.

This mode is recommended for beginners as well as experienced traders.

FXBLAST - AGGRESSIVE

It's characterized by the fastest signals as well as the largest potential profit with increased risk. If you are familiar with scalping and catching the quick market movements, you should choose this trading mode. Scalping mode is recommended for advanced traders.

FXBLAST - SAFE

Provides the most secure signals, with less profit potential at the same time. Pick this mode if you want to spend the minimum amount of time in front of the computer.

This mode is recommended for every type of trader.

- System is ready for trading
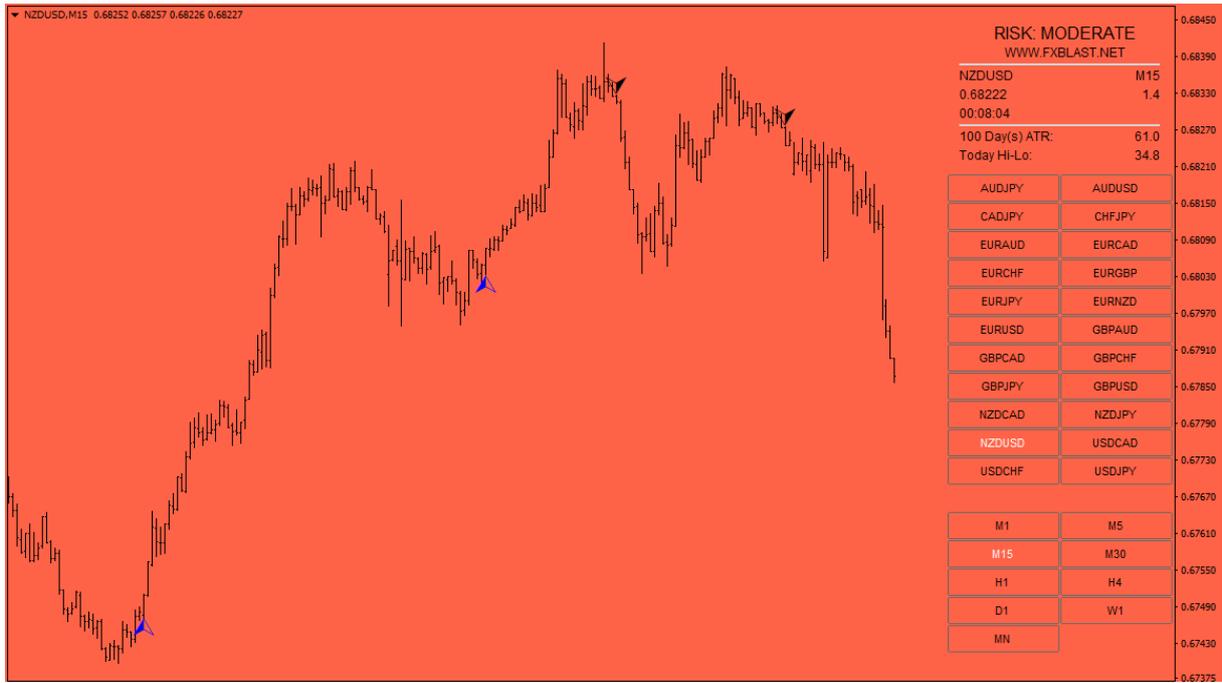

HOW IT WORKS

System provides very easy to read signals. Blue UP arrows provide buy signals, while black DOWN arrows provide sell signals.

Every trading signal is confirmed by an alert. You can pick 3 different alerts, when using the software:

- MT4 pop up + sound

- Email alert

- Mobile (push) notifications

System provides also trading assistant, that will help you with pair and timeframe changes. Just click the pair you want to switch and the chart will change immediately.

STOP LOSS

Recommended stop loss should be placed below/above entry signal swing.
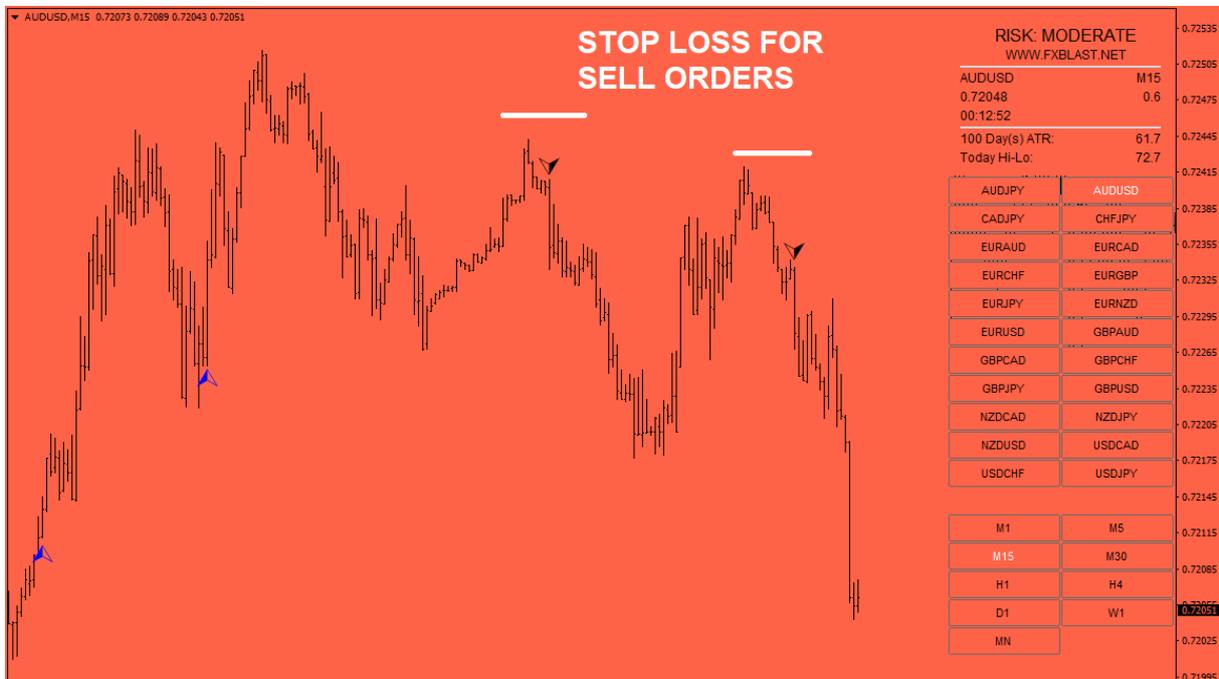

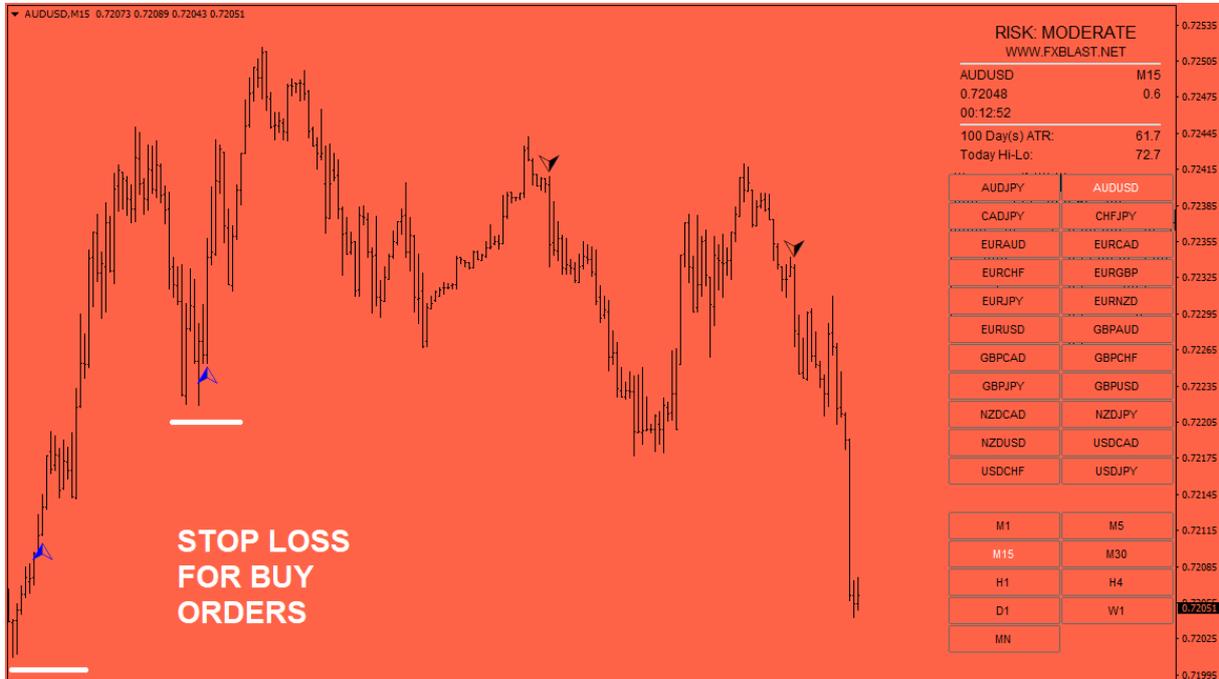

You can also use a different, but also good technically place like:
- at the round number or close to important support/resistance area.

TAKE PROFIT

Take profit can be realized using RR ratios. When you know your stop loss value (for example: 15pips), you can set your TP for 15 pips too, which gives RR: 1:1.
If the market is moving fast, you can extend it to 1:2 (so 15pips SL / 30 pips TP).

TRADING TIPS:

- Try to trade on the major sessions (US/EU), when the market offers the biggest volatility (that way you can get more pips from any trade).

- Do not trade before the major news. Always check economic calendar first.

- If you want to trade close to the major news anyway, please wait till announcement to see the market direction. Then try to find the place to join the further trend.

- Do not overtrade. Try to find 1-2 entries at the same time and watch the market. It's better to Focus on quality trades.
